STUDY OF FACTORS RELATED TO THE IMPLEMENTATION OF  
PUBLIC HEALTH PROTOCOLS IN THE PARK AREA SUMBERREJO  
DISTRICT BOJONEGORO REGENCY

x + 61 pages + 11 tables + 9 attachments

The Coronavirus again caused a pandemic at the end of 2019, causing an acute respiratory disease called Covid-19. To handling it, the government has sought Health Protocols as a form of preventing the transmission of the virus. This research aims to determine the factors that influence the community to implementing the Health Protocols in the park area of Sumberrejo District, Bojonegoro Regency.

This research is a Descriptive Research with a survey method. The population in this research as many as 1000 people obtained from the number of traders and the average of the park visitor. In determining the respondents it use the Proportional Random Sampling (Finit) formula to determine the number of samples, which are 280 people. And data analysis using Chisquare test.

The result of the research showed that 70% of the respondents were knowledgeable and well behaved, the result showed that there was a relationship that knowledge influenced the attitudes. But in their actions, no one applies the social distancing, only 31,1% wear mask, and only 9,6% wash their hands because there are no hand washing facilities in the entire park area. The officers are not comprehensive in term of implementing the Health Protocols. So that there are many violations of Health Protocols.
