ABSTRACT

The market is a place for buying and selling merchandise, this will lead to various activities and liquid waste problems will arise. Meat and fish stalls at Warujayeng Market, Nganjuk Regency in their daily activities can generate various solid wastes carried by liquid waste, from the suction that has been carried out, 50% of the suction results are in the form of solid plastic waste. This study aims to determine the relationship between the sanitary conditions of the sewerage and the behavior of sellers, buyers, and janitors.

This type of research is analytic, with a total sample sampling technique. The sample is divided into three, namely the sample for the seller there are 71 respondents, the buyer 50 respondents, and the cleaning staff there are 3 respondents. Data was collected by interview, observation and using an assessment questionnaire.

The results of the chi square test show that there is a relationship between the seller and the sanitary conditions of the sewerage with a p value of $0.030 < 0.05$, so H_0 is rejected. Good knowledge is also expected to be supported by the application of action, balanced with direction so that there is a balance and will lead to good sanitation conditions for sewerage.

Keywords : Liquid waste, Solid Waste, Sanitary Condition of Sewerage, Behavior of Seller, Buyer, and Cleaning Officer.
