THE EFFECT OF APD USE ON BREATHING INTERFERENCE IN WORKERS IN THE HOME INDUSTRY OF WEST SURABAYA FURNITURE, 2020

1x + 56 pages + 5 pictures + 16 tables + 5 attachments

Wood dust can cause breathing problems in workers. Wood dust flying in the air enters the bodies of workers who do not use APD masks while working through breathing. Respiratory disturbances caused by wood dust on labor such as coughing, nasal congestion, shortness of breath. This study aims to analyze the effect of APD use on respiratory disorders in West Surabaya furniture industry home workers.

This research is analytic with cross sectional approach. Data collection was carried out by observation and interview, from 28 workers randomly drawn from 30 workers in the section of cutting and sanding wood. The study was conducted at the West Surabaya home furniture industry.

The collected data is presented in the form of a table, then analyzed statistically using the correlation test found that the use of personal protective equipment (APD) get a value of ρ of $0,000 \leq 0.05$ (5%), which means there is the influence of personal protective equipment (APD) with respiratory problems in furniture workers in the cutting and sanding section. The characteristics of the workers such as the age of the workers get a value of ρ of $0.003 \leq 0.05$ (5%), which means that there is an influence of the age of workers with respiratory disorders in furniture workers in the section of cutting and sanding. fully affect breathing problems in workers such as prolonged exposure to workers in exposure to dust.

The conclusion of the use of APD and the characteristics of workers in addition to the duration of exposure affect the respiratory disorders felt by workers. Workers must use APD when working to prevent breathing problems.

Keywords: Use of PPE, respiratory complaints
